

EAST TEXAS ASSESSMENT PSYCHOLOGICAL ASSESSMENT SERVICES

ADHD

ADHD, also known as Attention Deficit Hyperactivity Disorder, may present with symptoms of inattention, hyperactivity, and impulsivity.

Learning Differences

These encompass a range of functioning that influence an individual's learning, information processing, and comprehension abilities. Examples of these include dyslexia, dyscalculia, and dysgraphia.

Autism Spectrum

Autism may influence social interaction, communication, behavior, and sensory processing. The term "spectrum" is used because the presentation can vary widely among neurodiverse individuals.

Mood/Anxiety disorders

Mood disorders are characterized by persistent changes in mood, energy, and activity level that can significantly affect function in daily life. Anxiety disorders are characterized by excessive worry and fear about everyday situations, which can also influence functioning.
